

IDEATION

1. Create a login for hospital administrators and doctors to specify requirements ,update the necessary status information and review medical documents of donors to verify validity.
2. Create a login for donors to register themselves as donors , view requirements and see locations and cases wherein their blood type matches requirements .
3. Develop an interface that tracks available reserves in hospitals and donors and send message notifications or emails when reserves are depleted or when there is an unprecedented requirement for plasma of a particular blood group.
